(Hoesbach/Germany, May 19, 2009)

ASC Presents Integrated Recording Solution for EADS TETRA at TETRA World Congress 2009

Successful Implementation by Large German Utility Company

Hoesbach/Germany, May 19, 2009 – ASC (www.asctelecom.com), a leading global provider of innovative solutions to record, analyze and evaluate communications, today announced it will exhibit its new integrated recording solution for EADS TETRA (Terrestrial Trunked Radio) at the TETRA World Congress 2009, at the International Congress Center in Munich, Germany, on May 26-29, 2009, at booth C902.

The event unites TETRA users, manufacturers, network operators, application developers and system integrators from around the world. This year, over 2,500 participants are expected to attend over 150 speeches and visit over 100 exhibits.

TETRA, an interoperability standard for professional mobile radio communications, was delineated by the European Telecommunications Standards Institute (ETSI) to allow interaction among mobile equipment from multiple vendors. Its flexible digital addressing helps various organizations communicate during emergency situations.

ASC will demonstrate its new recording solutions for EADS TETRA, which is now in use by a large utility company in Bonn, the former capital of Germany. ASC's MARATHON EVOLUTION recording system is connected to the EADS TETRA switch and captures all internal communications between the dispatch station and field staff.

Harald Zapp, Chief Operating Office of ASC, said, "Our communications recording solution for TETRA provides a powerful yet practical solution for any TETRA network system in dispatch or command-and-control environments, and we look forward to demonstrating its capabilities at the TETRA World Congress 2009. We are particularly proud of its successful implementation by a large German utility company because this organization follows a rigorous selection process before choosing its providers."

ASC's MARATHON EVOLUTION is capable to record group calls and individual calls as well as short data services (SDS) within a TETRA network. Up to 120 calls can be recorded simultaneously while maintaining secure communications with the dispatcher. The system provides fail-safe operation as well as redundancy through a mirrored hard disk. ID and time stamps are tagged to each recording to facilitate analysis of incidents and provide protection from liability.

ASC's MARATHON EVOLUTION Suite for TETRA includes MARATHON EVO*lite*, MARATHON EVOLUTION and MARATHON EVOLUTION XXL to meet the needs of any organization no matter what size. It records all voice and data communications on one, scalable platform while maintaining fast and efficient playback of interactions.

About ASC

ASC is a leading global provider of innovative solutions to record, analyze and evaluate multimedia-based communications. ASC's solutions reveal vital information, enabling companies and organizations to considerably improve their value creation: contact centers enhance customer service, efficiently deploy staff and increase productivity. Financial institutions fulfill documentation requirements, achieve a higher level of legal security and reduce costs. First responders and public safety organizations enhance reactivity in emergency situations; therefore, ASC provides an important contribution to public safety.

ASC solutions are innovative. They include workforce optimization, e-learning and e-coaching, and dynamically adapt to the rising demands of organizations across all industries and sizes. Due to their open architecture, they seamlessly integrate into any IT and communications environment. This provides investment protection whereas time and costs for implementation are reduced to a minimum.

ASC software is multi-tenancy capable. Customers obtain communications services from a provider like "water from a tap" - on demand, as required, and with maximum flexibility. In such an on-demand scenario, customers benefit from a sophisticated communications recording and analyzing platform without financial pre-investments. The multi-tenancy capability of ASC's solutions gives service providers the opportunity to open up new business sectors.

ASC is continuously improving the functionality, usability and interoperability of its solutions. Every year, about one-fifth of revenues are re-invested in research and development. The company, founded in 1964, with headquarters in Hoesbach, Germany, provides a global partner and service network. With subsidiaries in Great Britain, France, Switzerland, the United States, Japan and Singapore as well as certified distribution partners, ASC is represented in more than 60 countries worldwide. Global strategic partnerships with industry leading telecommunications vendors assure interoperability of ASC's solutions in virtually every IT infrastructure.
